Functional Description

1.ON DELAY [0]

Timing commences when supply is present. R energizes at the end of the timing period.

2.CYCLIC OFF/ON {OFF Start, (Sym, Asym)} [1]

T-ON and T-OFF can be same or different. The relay (R) keeps on changing its status until power is removed.

3.CYCLIC ON/OFF {On Start, (Sym, Asym)} [2]

This function is quite similar to the function '1' but initially the relay (R) is ON for period T-ON after the power is applied.

4.IMPULSE ON ENERGIZING [3]

After power ON, R energizes and timing starts. R de-energizes after timing is over.

5.ACCUMULATIVE DELAY ON SIGNAL [4]

Time commences as supply is present and switch B1 is open. Closing switch B1 pauses timing. Timing resumes when switch B1 is opened again. R energizes at the end of timing.

6. ACCUMULATIVE DELAY ON INVERTED SIGNAL [5]

Time commences as supply is present and switch B1 is closed. Opening switch B1 pauses timing. Timing resumes when switch B1 is closed again. R energizes at end of timing.

7. ACCUMULATIVE IMPULSE ON SIGNAL [6]

When supply is ON, R energizes. When switch B1 is closed timing is suspended and remains suspended till switch B1 is opened again. Interrupting supply resets timer.

8.SIGNAL ON DELAY [7]

Permanent supply required. Timing starts when switch B1 is closed. R energizes at end of timing period and de-energizes when B1 is opened.

9.INVERTED SIGNAL ON DELAY [8]

Timing will commence when supply is present and switch B1 is open. R energizes after timing. If B1 is closed during timing period, timing resets to the beginning of cycle.

10.SIGNAL OFF DELAY [9]

Permanent supply is required. R energizes when switch B1 is closed. Timing commences after S is opened and then the relay de-energizes.

11.IMPULSE ON/OFF [A]

Permanent supply is required. R energizes for the timing period when B1 is opened or closed. When timing commences, changing state of B1 does not affect R but resets timer.

12.SIGNAL OFF/ON [B]

When switch B1 is closed or opened for preset time 'T,' the relay changes its state after time duration T.

13.LEADING EDGE IMPULSE1 [C]

A permanent supply is needed. When B1 is closed, output relay energizes until timing irrespective of any further action of B1.

14.LEADING EDGE IMPULSE 2 [D]

Permanent supply is required. when switch B1 is closed, and remains closed output relay energizes until timing is over. If B1 is opened during timing, R resets.

15.TRAILING EDGE IMPULSE 1 [E]

Permanent supply required. when B1 is opened, R energizes and de-energizes when timing is over. If B1 is closed during timing R resets.

16.TRAILING EDGE IMPULSE 2 [F]

Permanent supply is required. When switch B1 is opened, R energizes and will de-energize when timing is over. If B1 is pulsed during timing period it Will have no effect on R.

17.DELAYED IMPULSE [G]

When switch B1 is closed, T_{OFF} starts. Relay energizes at the end of T_{OFF} period. Then, T_{ON} starts irrespective of signal level and relay de-energize at the end of T_{ON} period.

18. INVERTED SIGNAL ON DELAY-TYPE 2 [H]

Timing starts only upon signal 'B1' transition high to low. During timing or after completion of Time (i.e. relay on), any signal transition is ignored. To reset the timer supply has to be interrupted.

NOTE: Mode 'J' is additional mode and applicable only for V0DDTS1S cat Id. Functionality of mode 'J' is similar to mode 'G'. It is customized mode.
