FUNCTIONAL DIAGRAMS

Mode 1 - On Delay

1. On application of supply voltage & start signal, preset time duration (T) starts. On completion of the preset time output relays 1 & 2 are switched ON.
2. On the application of reset signal time & relay are reset.
3. For continuous application of start signal, the preset time duration does not restart until the device gets a reset signal.

Mode 2 - Interval

1. On the application of the supply voltage & start signal, preset time duration (T) starts & Output relays 1 & 2 are actuated till pre-set time (T) is completed.
2. On the application of reset signal run/process time & relay are reset.

Mode 3 - Cyclic ON First, Mode 4 - Cyclic OFF First

1. On the application of supply voltage & start signal, the output relays 1 & 2 are initially switched ON for preset time duration (T1) & then switched OFF for preset time duration (T2).
2. Cyclic OFF first - On application of supply voltage & start signal, the output relays 1 & 2 are initially switched OFF for preset time duration (T1) & then switched ON for preset time duration (T2).
3. The cycle repeats and continuous till supply is present.
4. On the application of reset signal run/process time and relay are reset.

Illustration for Gate Signal - On Delay, Interval Start - Gate

1. On the application of supply voltage & Gate signal, the preset time (T) does not start & relay outputs remain OFF.
2. After removing the Gate signal preset time (T) starts. For ON delay mode, the relay outputs are switched ON after completion of preset time (T). For interval mode, the relay outputs are switched ON for the duration of preset time (T).
3. During the preset time if the gate signal is applied then the preset time pauses till the gate signal is present.
